WEEKLY SURVEYOR

OSI-TSWS-15/68

8 April 1968

Directorate of Science and Technology

This publication is intended to furnish the intelligence community with a timely survey of significant current scientific intelligence. The items herein are based on selected incoming reports of all kinds received during the previous week. The comments represent the views of the Office of Scientific Intelligence and the Foreign Missile and Space Analysis Center and are coordinated to the extent possible in the time available within CIA but, being based on the material at hand, are subject to change on receipt of further information or analysis. We caution against action taken solely on the basis of the preliminary evaluations herein. Substantive questions concerning items in this publication may be addressed directly to the [REDACTED] OSI, CIA Headquarters, Langley. [REDACTED]

Questions concerning distribution should be forwarded through appropriate departmental channels.

BIOLOGICAL/CHEMICAL WARFARE

CW Plays Significant Role in Major Cuban Defense Exercise:
CW activities played a significant role during a Cuban island-wide military and civil defense exercise held 9-12 October 1967. Simulated enemy chemical attacks with sarin (GB) were carried out against the Varadero Air Surveillance Site, the San Antonio de los Baños Air Base, and against a troop unit along the road. [REDACTED]

Comment: Cuban CW training frequently has been noted, but usually on a smaller scale [REDACTED]. Simulated chemical attacks against several target areas, each of a different type troop unit, provide a higher level of integrated CW training than heretofore seen. In none [REDACTED] have there been any references to a retaliatory attack, which suggests that Cuba does not have an offensive CW capability. [REDACTED]
